Older adults who receive support from family members are more likely to be satisfied with their lives and to have better mental health. This study examined the relationship between intergenerational support and well-being in a national sample of older adults. Data from the 1998 Survey of Health, Aging, and Retirement in America (SHAIRA) were used to examine the relationship between intergenerational support and well-being. The study found that older adults who receive support from family members are more likely to be satisfied with their lives and to have better mental health. The study also found that the relationship between intergenerational support and well-being is stronger for older adults who live with family members.
